1. Introduction

The Project Design Phase focuses on defining the detailed design of the system that automates the standard laptop procurement process using ServiceNow Flow Designer. The objective is to create a simple, efficient, and automated workflow that helps employees request laptops, get approvals, and track procurement status with minimal manual effort.

2. Objectives

- Automate the standard laptop procurement process using Flow Designer.
- Ensure only approved standard laptop models are requested.
- Reduce manual intervention and follow-ups.
- Provide real-time status tracking and notifications.
- Maintain data accuracy and transparency in the procurement process.

3. System Design

3.1 Overall Architecture

The proposed system consists of the following components:

Employee → Service Portal (Request Form) → Flow Designer (Workflow Automation) → Tables (Database)

Flow Designer ↔ Approval Groups (Manager / Procurement)

The employee submits a laptop request through the request form. The Flow Designer automates the workflow by validating the request, sending it for approval, and updating the procurement status. The required information is stored in the database tables.

3.2 Key Components

Component	Description
Service Portal	User-friendly form for laptop requests.
Flow Designer	Automates the approval and procurement workflow.
Tables	Stores request, employee, laptop model, approval, and status details
Approval Groups	Manager and procurement team responsible for approvals
Notifications	Email or platform notifications for status updates.

4. Functional Requirements

No.	Feature	Description
1	Laptop Request Form	Allow employees to select a standard laptop model and submit a request.
2	Validation	Check mandatory fields and standard model availability.
3	Approval Process	Manager approval followed by procurement approval.

4	Procurement Processing	Create a purchase order and update the procurement status.
5	Status Tracking	Employees can view the current request status in the portal.
6	Notifications	Send email or portal notifications at each stage.

5. Process Flow / Workflow Design

The proposed procurement workflow consists of the following steps:

Step 1: Employee Submits Request

The employee submits a laptop request by entering the required details and selecting a standard laptop model.

Step 2: Request Validation

The system checks the mandatory fields and verifies the availability of the selected standard laptop model.

Step 3: Manager Approval

The request is sent to the manager for review and approval. The manager can approve or reject the request.

Step 4: Procurement Processing

After approval, the procurement team processes the request and updates the procurement status.

Step 5: Delivery and Status Update

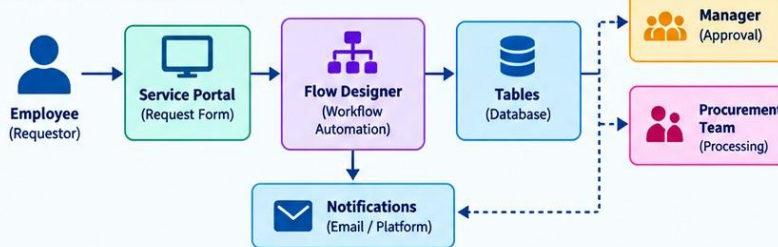

The delivery details are updated in the system, and the employee receives the final status notification.

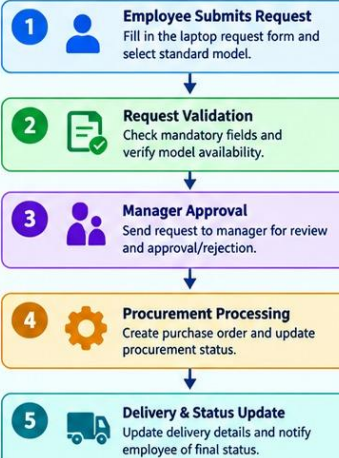

Project Design Phase

Streamlining IT Procurement – Automating Standard Laptop Procurement

1. System Architecture

2. Process Workflow Design

3. UI Design – Key Screens

3.1 Laptop Request Form

Laptop Request	
Employee Name	
Department	
Laptop Model	
Purpose	
Submit	

Form Fields:

- Employee Name
- Department
- Laptop Model
- Purpose
- Submit Button

3.2 Approval Page

Pending Approvals	
Request ID	#LR001
Employee Name	John Kumar
Laptop Model	Dell Latitude 5440
Purpose	Office Work
Approve Reject	

Details Displayed:

- Request ID
- Employee Name
- Laptop Model
- Purpose
- Request Status
- Approve / Reject Buttons

3.3 Procurement Status Page

My Requests	
Submitted	12-04-2025
Approved	13-04-2025
In Progress	14-04-2025
Delivered	-

Status Stages:

- Submitted
- Approved
- In Progress
- Delivered

3.4 Completed View

Request Completed	
☒ Request Completed	
Request ID	#LR001
Laptop Model	Dell Latitude 5440
Delivery Date	18-04-2025
View Details	

Details Displayed:

- Completion Status
- Delivery Confirmation
- Request Details

4. Database Design

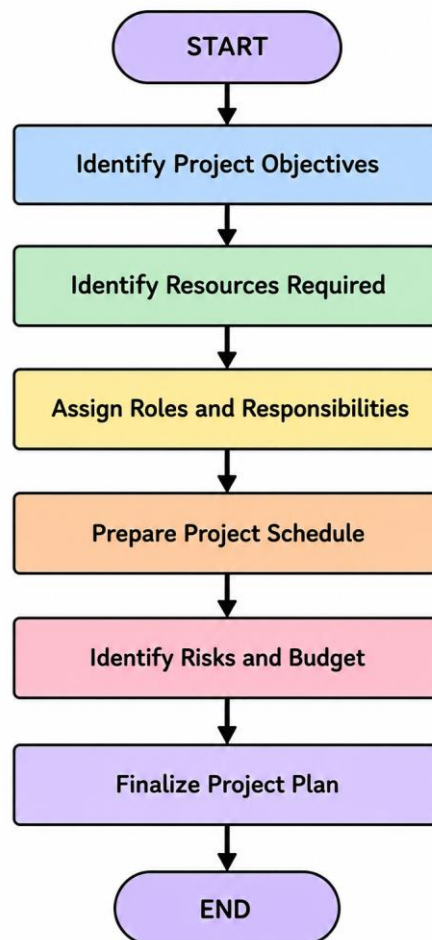

5. Key Features

- Standard laptop configuration selection
- Employee request submission
- Request validation
- Manager approval
- Procurement status tracking
- Notifications and alerts
- Request history management

6. Expected Outcome

- Automated laptop procurement workflow
- ✓ Reduced manual effort
- ✓ Standardized laptop models
- ✓ Improved request tracking
- ✓ Faster approval process
- ✓ Transparent and efficient procurement system

1. Project Planning Phase – Flow Diagram

6. UI Design (Screens / Pages)

6.1 Laptop Request Form

The Laptop Request Form allows employees to submit a laptop procurement request.

Form Fields:

- Employee Name
- Department
- Laptop Model
- Purpose
- Submit Button

6.2 Approval Page

The Approval Page allows the manager or authorized approver to review and process laptop requests.

Details Displayed:

- Request ID
- Employee Name
- Laptop Model
- Purpose
- Request Status
- Approve Button
- Reject Button

6.3 Procurement Status Page

The Procurement Status Page allows employees to track the progress of their laptop request.

Status Stages:

- Submitted
- Approved
- In Progress
- Delivered

6.4 Completed View

The Completed View displays the final status of the laptop procurement request after successful delivery.

Details Displayed:

- Request Completion Status
- Delivery Confirmation
- Request Details

7. Database Design

The system stores employee, laptop, request, approval, and delivery information in database tables.

Table Name	Purpose
u_employee	Stores employee details.
u_laptop_model	Stores standard laptop specifications.
u_procurement_request	Stores request details and status.
u_approval	Stores approval information.
u_delivery	Stores delivery and tracking details.

Note: The table names above are proposed examples. Use the actual table names configured in your ServiceNow project.

8. Security and Access Control

- Role-based access for employees, managers, procurement team members, and administrators.
- Only authorized users can approve or process requests.
- Access to procurement data is controlled through appropriate ServiceNow ACLs and permissions.
- Data security is maintained through role-based access and, where required, separation of responsibilities.

9. Expected Outcome

The project design aims to provide an automated, transparent, and efficient laptop procurement process. It helps reduce manual work, improve request tracking, standardize laptop models, and provide real-time updates to relevant stakeholders.
