

PROJECT TESTING PHASE

STREAMLINING IT PROCUREMENT – AUTOMATING STANDARD LAPTOP PROCUREMENT

1. Introduction

The Project Testing Phase focuses on verifying and validating the functionality of the Standard Laptop Procurement Automation System developed using ServiceNow Flow Designer. Testing ensures that the laptop request process, approval workflow, notifications, and status updates work as expected. The main objective is to identify errors and ensure that the system meets the defined project requirements.

2. Objectives of Testing

- Verify that the laptop request form functions correctly.
- Ensure that mandatory fields and validation rules work properly.
- Test the approval and rejection workflow.
- Verify the automation of procurement request processing.
- Check the accuracy of status updates and notifications.
- Identify and resolve system errors.
- Ensure that the system meets the defined functional requirements.

3. Testing Strategy

The project uses a structured testing approach to verify the different components of the procurement automation system.

3.1 Functional Testing

Functional testing verifies whether the system features work according to the specified requirements. The following features are tested:

- Laptop request form.
- Request validation.
- Approval and rejection process.
- Procurement status updates.
- Notifications.
- Request tracking.

3.2 Workflow Testing

Workflow testing verifies whether the ServiceNow Flow Designer executes the defined process correctly. The workflow is tested from request submission through approval, procurement processing, and final status updates.

3.3 Integration Testing

Integration testing verifies the interaction between the request form, Flow Designer, approval process, database tables, and notification system.

3.4 User Acceptance Testing

User Acceptance Testing verifies whether the system meets the practical requirements of employees and procurement team members.

4. Test Environment

Component	Description
Platform	ServiceNow
Workflow Tool	ServiceNow Flow Designer
Database	ServiceNow Tables

Browser	Supported Web Browser
Testing Method	Manual Functional and Workflow Testing
Test Users	Employee, Manager, Procurement Team

5. Test Cases

Test Case ID	Test Scenario	Expected Result
TC01	Submit a laptop request with valid details.	The request is submitted successfully.
TC02	Submit a request without mandatory fields.	The system displays validation messages.
TC03	Select a standard laptop model.	The selected laptop model is accepted.
TC04	Submit a request for manager approval.	The request is sent to the appropriate approver.
TC05	Approve a laptop request.	The request status is updated to Approved.
TC06	Reject a laptop request.	The request status is updated to Rejected.
TC07	Process an approved procurement request.	The procurement process is initiated successfully.
TC08	Update the procurement status.	The updated status is stored and displayed correctly.
TC09	Verify notification delivery.	The relevant notification is generated or sent as configured.
TC10	Complete the delivery process.	The request is marked as Delivered or Completed.

6. Testing Procedure

The following steps are followed during the testing process:

1. Open the ServiceNow platform.

2. Access the laptop procurement request form.
3. Enter valid employee and laptop details.
4. Submit the request.
5. Verify that the request is created successfully.
6. Check whether the request is sent for approval.
7. Test the approval and rejection actions.
8. Verify the procurement status updates.
9. Check the configured notifications.
10. Record the test results and identify any errors.

7. Defect Identification and Resolution

During testing, any errors or unexpected behavior are identified and documented. The following details are recorded:

- Test Case ID.
- Description of the Issue.
- Steps to Reproduce.
- Expected Result.
- Actual Result.
- Defect Status.
- Corrective Action.

Identified issues are analyzed and resolved by modifying the relevant configuration or workflow. The affected test cases are then executed again to verify the correction.

8. Test Result Documentation

The test results are recorded to determine whether each test case has passed or failed.

Test Case ID	Test Description	Result
TC01	Valid laptop request submission	Pass / Fail
TC02	Mandatory field validation	Pass / Fail
TC03	Manager approval workflow	Pass / Fail
TC04	Request rejection workflow	Pass / Fail
TC05	Procurement status update	Pass / Fail
TC06	Notification verification	Pass / Fail
TC07	Delivery completion update	Pass / Fail

Note: The actual test results must be updated after executing the test cases in the ServiceNow environment.

9. Expected Outcome

The Project Testing Phase ensures that the Standard Laptop Procurement Automation System performs its intended functions correctly. It helps identify and resolve workflow errors, verify approval processes, ensure accurate status updates, and improve the reliability of the system. Successful testing supports the delivery of an efficient and structured IT procurement automation solution.

10. Conclusion

The testing process validates the key features of the laptop procurement system and ensures that the configured ServiceNow workflow operates according to the defined requirements. The test results provide a basis for identifying improvements and preparing the system for final demonstration and implementation.
